DECO-PRINT

WHO WE ARE:

The Deco-Print line of products from Thermopatch has been specifically designed to offer alternative solutions to sewn-in labeling and other older methods of decorative trimming. In other words, to help you "Lose the Tag." Deco-Print offers an assortment of heat-sealable products including:

- Hot Paper Transfers
- Silk Screened Transfers
- Direct Printing
- Application Equipment
- Supplies

Deco-Print is the result of over 60 years of experience generating labeling equipment, emblems and supplies for the garment industry. We focus on high quality products that save time and labor costs. Our flexible solutions are perfect for any size business, and we back it up with experience and service so you can focus on doing what you do best.

Whatever your labeling or decorating needs are – we can help. Deco-Print is supported by a worldwide network of very knowledgeable sales and support personnel. Just tell us what you want to accomplish and send us a garment sample. Then we'll show you the difference Deco-Print technology and experience can make.

DIRECT PRINTING

Deco-Print's direct printing alternative to sewn-in labels helps you "Lose the Tag."

Deco-Print, using the DP2000 printing machine, is the low-cost, high-speed direct printing solution you have been waiting for. Now mark garments, linens and textiles in an instant. From permanent labels that stand up to industrial laundry to ones designed to fade over time, Deco-Print's flexible applications give designers almost limitless options to sewn-in tags. Call us and see why the most respected brands in the world trust Deco-Print for their labeling needs.

HOT TRANSFERS

Deco-Print offers a wide variety of transfers, from simple to complex application solutions depending on your design requirements.

SCREEN PRINT TRANSFERS

Screen Print Transfers can be Puff, Glitter, Opaque and Multi-color. These are great for marking on both light and dark garments, and can be applied in only a few seconds. This is a surface transfer produced on sheets which can be cut and stacked.

HOT PAPER TRANSFERS

Transfers printed on a heat resistant paper are absorbed into the fabric. Available in rolls or can be cut and stacked. Can be applied in as little as one second. Since these transfers utilize inks that are absorbed into the fabric, they have excellent durability and elasticity.

TRUFLEX TRANSFERS

Truflex is a highly versatile and flexible transfer. It is ideal for applications requiring high definition images and strong colors and can be applied to a vast assortment of fabrics including most synthetics. This surface transfer is only available cut and stacked.

APPLICATION EQUIPMENT AND SUPPLIES

We offer a complete line of heat seal equipment to handle all application needs quickly and with excellent quality. Heat seal machines can be used for everything from simple transfers to embroidered appliques.

DP2000

The DP2000 direct printing machine utilizes a proprietary ink and engraved plate to apply imprints of eight point font or greater directly onto the fabric/garment very rapidly.

The imprinting takes place in a fraction of a second, which simply means that production numbers are the direct result of operator efficiency. It can also be used for heat seal applications.

HiQ

Our industry-leading HiQ Thermal ID Bar Code Label System is built to keep things moving with ease-of-use, flexibility and proven reliability - even in the most demanding circumstances.

NL-18

Ideal for high-volume applications, the NL-18 is a fingertip-controlled pneumatic press with a swing head and digital controls.

Nearly a dozen other manual and automatic heat seal machines are also available. Choose the one that best meets your needs.
